Contact:

General:

The licensee has the right to use the software acquired from Process-Informatik Entwicklungsgesellschaft mbH (see overleaf) for internal and independent purposes only.

The production of equivalent software and its distribution are prohibited.

It is not permitted to pass the software in any form or the documentation as a whole or in parts to third parties. Permanent distribution (sale or gift) of the software is permitted, but only under the proviso that the software is distributed completely with all programs and files originally contained on the delivered floppy disks, all updates received in the meantime, all data carriers received with the original delivery or any possible updates, all independently produced duplications and all written materials contained in the original delivery or update deliveries, in particular the operating manual. Further use of the software or of software products based upon it (e.g. in the case of software tools) is prohibited for our licensee and the users of his/her application programs after distribution. Any other distribution, in particular the rental of software, is prohibited.

With our software, we have dispensed with using technical means such as dongles, because we believe that such tools only make handling the software more difficult for the licensee. The software is serialised, therefore the software can be used to provide legal proof indicating which licensee is the source of any possible unauthorised copy. The licensee is liable to the licensor for any damages incurred.

Any modifications or additions to this contract must be made in writing. All verbal agreements are invalid.

Important notes:

By opening the seal, the licensee indicates his/her acceptance of this license agreement.

The licensee may use our technical hotline service as soon as this signed license agreement has been received.

Liability and remedying faults:

We have produced and tested this software with the utmost care. However, we would like to point out that it is not possible given the current state of the art to produce computer software which will always function perfectly in every application or combination. Therefore it is impossible for us to accept any liability or warranty for faults or damage which may occur because of or during the use of the software. Faults will be remedied free of charge in accordance with our terms of business (see reverse side of invoice).

Rights of use:

The **single-user license** and the **subsequent licenses** may be used once only at the same time, analog to the possibility of using a printed book.

The licensee may use the **corporate license** without any restriction of numbers. However, it may not be passed on to external third parties linked to the licensee. In the case of companies with several plants or branches, the licensee in each case is the respective plant or individual branch.

In the case of the **source-code license**, the same rights of use apply as with the corporate license.

The **school license** may be used in accordance with the corporate license; however, this license may be used for non-commercial training purposes only. This clause refers to personal further education and non-commercial use, free of charge. Any use in connection with an industrial commission corresponds to commercial use and so requires a normal license. In case of any infringement, we reserve the right to assert a claim for damages against the training center or educational institution and the undersigned, respectively. We recommend that the licensee should confirm this license agreement to the licensor by arranging for the signatures of the individual trainees involved. In this case, the trainee himself/herself would be liable for any personal infringement.
