**Menutree Website:**

- + Products / docu / downloads
- + Accessories
- + Connector plug / equipment
- + MPI- / Profibus connecting cable (for Tele-Service)

Please make sure to update your drivers before using our products.

## Ethernet and WIFI coupling to the S5-PLC

## Move around the machine wirelessly

Controlling/monitoring all around the machine with a PC => nobody has such a long cable with them

Move around the machine without fear that the cable will be too short or someone will run over it and damage it. Always ONLINE and intervene at the appropriate moment or trigger a circuit-breaker/button and observe the reaction of the machine, always ONLINE via WIFI on the machine.

LAN-WIFI-conversion solves all problems and possible dangers

## Direct Fax

By direct dialling up the fax machine a message is carried out to a fax-receiver. If a connection comes off the message will be transmitted.

## Router - Mode (access to the network without router)

The Tele-Prof-II can also be used as a router for access from a PC via dial-up connection, so that a communication with the behind covered network results. Furthermore a network connection can be made with the TP-II TP-II-line, but in doing so the IP-address-root must differ.

## Protection of data areas in the PLC

You have in your facility machinery with complex program structures and want to prevent that the users do not change comprehensible content? No problem, with the S7-firewall you can assign specific data fields to each user or even generally protect certain data areas in the PLC.

## Network-analysis/-monitoring easy

Analyze network-problems and network-conflicts with little effort. Simply plug the TINA-II into the network, open website of the integrated web-server via WIFI and start working.

No unnecessary search for a hub to record the logs. TINA-II records in the usual WireShark-format, i.e. save the recording on a PC and view and evaluate it later with WireShark.

Monitoring the network, automatically send an email to the administrator if there is no participant or if there is a new participant (Intrusion-detection into the network)

Calculate the probability of failure of the participants

All of this can be achieved with TINA-II
