S7-PLC triggered DB-backup/-restore without additional PC via MPI/Profibus on FTP-server
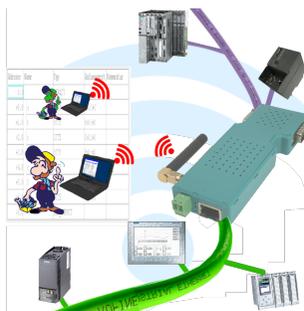

Wired or wireless communication (WIFI) via the same adapter with the respective control Devices from the BRIDGE-family always connect a wired-network with a wireless-network (WIFI) and a specific PLC-interface. This gives you access to the directly connected controller via WIFI (with S7 to the entire bus) as well as to the wired Ethernet. Of course also from wired Ethernet to WIFI and control/bus.
Always connected to each other, all made possible by the devices of the BRIDGE-family.
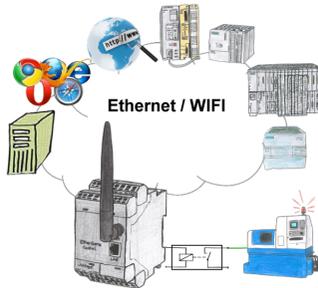

Switch with the EtherSens Control with relay-output easily and directly over LAN or WIFI up to 230VAC/16A, switchable over web-browser, TCP/IP-protocol or PLC-controlled. At the same time you monitor the switching-states on the optional SD-card or on the FTP server.

User dependant network access
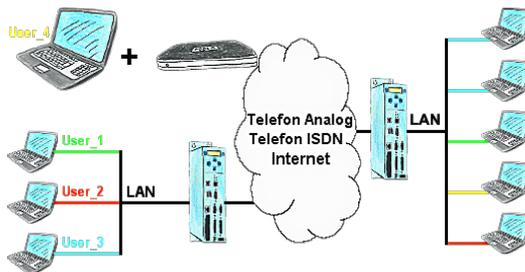

You have PLC/LAN-participants different supplier in your network and everybody should have access to this network? No problem, you give every supplier a VPN-username and passwort, define in the destination device a user-dependent network-access and after positiv login he only can communicate to the released ip-addresses.
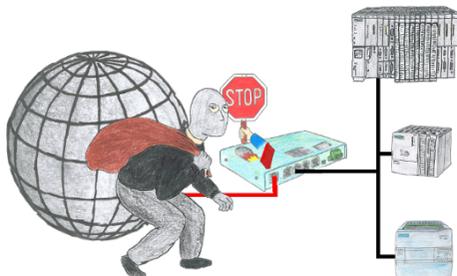

You want to protect your system against unauthorized access and changes? No problem, with the S7-firewall you secure your system against unauthorized access and thus prevent deduction or alteration of your system and process data.

Simple and uncomplicated remote maintenance
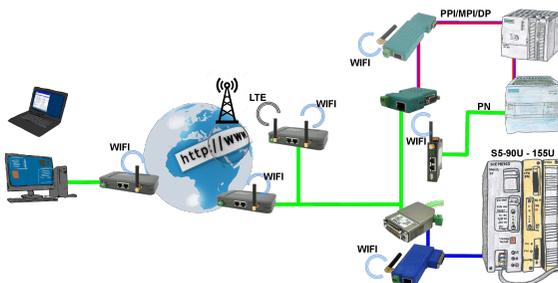

Simple and uncomplicated remote-access to your devices/systems via the Internet
 VPN-tunnel, registration at any portal is not necessary, activate the device and select and communicate with the opposite system
  No great effort to implement access. Use of the devices without consulting IT, no time-consuming commissioning procedure
  All your devices in your own cloud, no access from third-party CONNECT-devices to your devices/systems
