Occupied programming interface => does not have to be

Your Programming-interface of the PLC is already occupied with a panel or PC or communication-processor?

You should accomplish program modifications without removing the other communication-partner? You connect the PLC-specific Multiplexer one-time to the PLC and then connect the communication-partner and also your PC. Now you can work parallel with the PLC without the need of affecting the operation/communication of the panel/CP.

You can even work with 2 programming devices simultaneously, 2x open the same block, only changes which are stored at last will be finally stored in the PLC. Also ideal for trainings purposes if PLC's with IO's are scare goods.

Multiplexer-devices of the PG-MUX-II-family are the ultimate service-device, regardless of what you plug into the two PG-sockets, both participants communicate parallel with the controller.

Coupling S5-controller with PD-port at S5-controller with PD-port via network

Energy-data acquisition

Do you also need the energy-consumption of your plant or need to determine the $\cos \phi$?
With the EtherSens Energy you can capture and record by using a Rogowski-coil or folding-core the required values.

Ethernet and WIFI coupling to the S5-PLC

Universal transfer of LAN-products into WLAN

You have a variety of LAN products and would like to communicate to them via WLAN?
No problem, with the WLAN-Klemme you will be able to contact all these products.

Remote maintenance of your S5-PLC via LAN / Internet

You have access to a on-site network and your PLC has no LAN-connection? No
problem, plug the S5-LAN on the PLC and you will have immediate access to the PLC
from afar.
