## Network your controls and increase the availability of backups

Your machines are fully distributed in your company area, it is not always a PC connected with the machine. What could be better than to connect the machines to your company network and backup the data central from one point!

With the option "Communication via S5-LAN++" and the S5-LAN++-modules, you can meet this requirement immediately.

## Wireless around the Beckhoff-PLC

Move wirelessly around the Beckhoff-PLC and communicate for example ONLINE in the status

## Remote maintenance / telecontrol of PLC-devices via LAN / internet

You have access to a on-site network and your PLC-device has no LAN-connection? No problem, plug the S7-LAN on the PLC-device and you will have immediate access to the PLC from afar.

## Coupling ProfiNet to MPI/DP inclusive WIFI-interface

Wired or wireless communication (WIFI) via the same adapter with the respective control Devices from the BRIDGE-family always connect a wired-network with a wireless-network (WIFI) and a specific PLC-interface. This gives you access to the directly connected controller via WIFI (with S7 to the entire bus) as well as to the wired Ethernet. Of course also from wired Ethernet to WIFI and control/bus.

Always connected to each other, all made possible by the devices of the BRIDGE-family.

## Remote-maintenance access independent of hardware

Why always take any additional hardware in the luggage for remote-access to your own systems and machines? Installing the Software-CONNECT on your PC you always have with it and access to your own CONNECT-cloud is always possible, no matter where you are.

Internet-access on the PC of course required.

## Programming of S5-PLC's via LAN

You would like to respond to your S5-PLC via LAN, but not integrate an Ethernet-CP?  
No problem, plug the S5-LAN++ on the PD-interface and access via LAN.
