Wireless around the S5-PLC

Move wirelessly around the S5-PLC and communicate for example ONLINE in the status

Remote-maintenance Siemens-S7-PLC with PN-Port with firewall

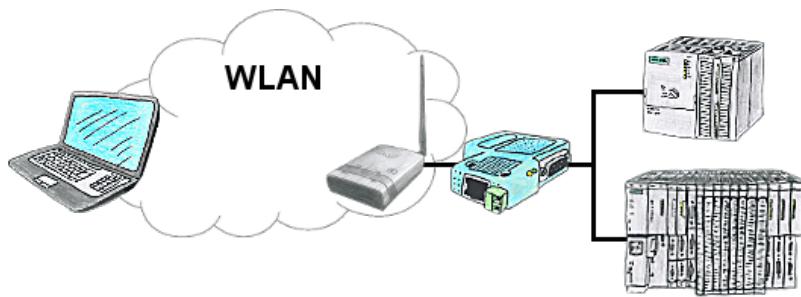

Remote-maintenance of a Siemens-controller with network-connection via secure VPN-tunnel and scalable firewall

To switch a MESSI-output via SMS

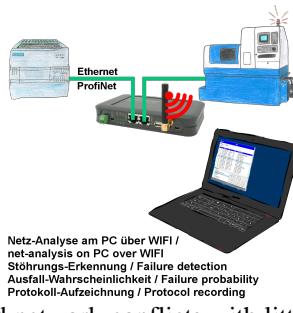

Switching an output via SMS is an integrated function of the MESSI. Herewith the switching operation will be secure and comprehensible from afar.

Operation as an access point

You are on site your plant and should move round the machine and simultaneously control or monitor. No problem, you parametrize ALF as an access-point and connect your S7-LAN or other network-client to him, connect your PC with him and you are online on the PLC.

Network analysis/monitoring made easy

Analyze network-problems and network-conflicts with little effort. Simply plug the TINA into the network, open website of the integrated web-server via WIFI and start working.

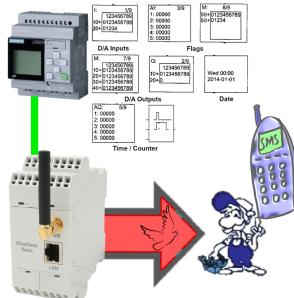

No unnecessary search for a hub to record the logs. TINA records in the usual Wireshark-format, i.e. save the recording on a PC and view and evaluate it later with Wireshark.

Monitoring the network, automatically send an email to the administrator if there is no participant or if there is a new participant (Intrusion-detection into the network)

Calculate the probability of failure of the participants

All of this can be achieved with TINA

SMS Email with LOGO!

Send of all kinds of SMS-messages controlled by the LOGO!-Control
