Independent operation through power-pack-supply

You want for e.g. moving around your system/control and need a 24V-DC-supply for your access-point ALF-UA?

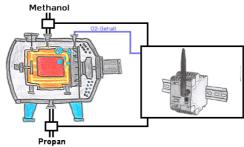

With USB-power-cable and a USB-power-bank/-accu, the problem can be solved immediately with little effort.

Wireless around the Pilz-PLC

Move wirelessly around the Pilz-PLC and communicate for example ONLINE in the status

Take over control-tasks

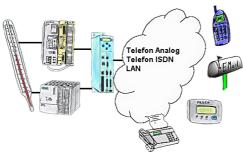

Capture with the Ethersens-device not only your process-values, you would be able to do control-tasks with the device.

DHCP-server/client

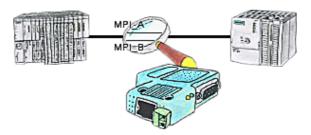

You need a DHCP server on your network. Activate this functionality in your EtherSens-device and you have immediately a server in the network. Consistently, the EtherSens-device also can act as DHCP-slave.

Failure report transmission released by the PLC

Your outstation reports the current value cyclically, or in case of malfunction the status via FAX, as SMS to your mobile phone, to your pager or also via e-mail.

Malfunctions on the Bus although everything is (apparently) connected properly?

The S7-LAN can also be used for controlling/checking the MPI/Profibus. It will be plugged on the Bus so that you can take a look at the status of the busses via software on PC, for example the numbers of parity errors.
