EtherSens-cloud

By the EtherSens-cloud each EtherSens-device can exchange data, transfer data and forward to other devices. As if you use one device that records all necessary parameters centrally.

| Variable-chart without Step7-programming package |
| --- |

You would like to give your customer the opportunity to read current numbers of the manufacturing Online, without installing a visualisation or even the STEP7-package? Then a S7-LAN with the option Status Variable" is needed, and your customer can take a look at these password protected data on a site of the integrated webserver.

Your visualisation-software does not support a 3964R-protocol, but you have to apply this package? No problem, connect the 3964R-LAN to your CP and activate the RFC1006-emulation in the module. Now your software gets the data from the module via RFC1006, which in turn communicates with the assembly via 3964R.
S7-1200/1500 to S5

Coupling S7-controller with PN-port at S5-controller with PD-port via network

Wireless around the Eaton-PLC

Move wirelessly around the Eaton-PLC and communicate for example ONLINE in the status

Data backup S7-PLC PN-port on FTP-server

S7-PLC triggered DB-backup/-restore without additional PC via PN-port on FTP-server
