Your pumping stations report the water levels of the central control via telephone network. The central office itself can of course transmit commands/messages to the substations as well. Thereto no dedicated line is required, it's sufficient when the stations connect via network (DSL-router).
Secure connection via network or internet or via modem-line with VPN?
   The TeleRouter fulfills all of these requirements. It contains an engine for VPN, regardless of whether a server or a client is required. Configuration of the VPN-engine and the device in general via the integrated web-server.
   A corresponding VPN-client for Windows can be downloaded free of charge as an installation-script from the download-page.
Communication with S5/S7-PLC (mainly), whether wired or via WIFI?
Universally armed for all requirements with the WIFI-sets, regardless of whether it is an S7-PLC, S5-PLC or a controller from another manufacturer with a LAN connection, having everything with you, depending on the used set, is your advantage.

 * S5-LAN++ or S5-BRIDGE for S5-PLC
 * S7-LAN or S7-BRIDGE for S7-PLC (PPI/MPI/Profibus)
 * ALF-UA as a pure converter from Ethernet to WIFI
 * Patch-cable or Cross-cable in order to act also wired

 With the WIFI-Set you simply have everything with you in a handy case, be prepared for everything.
This makes (on-site-) work a pleasure.

Profinet life cycle monitoring
Identify impending failures in your Profinet.
Creeping aging will be displayed to you very detailed.
The Profinet-Watchdog give you the change to react before something happens.

You have to link several S5-PLC's so that in case of need you can respond to all of them without modifying the PLC-program? No problem, connect all PLC's that are in the run with the IBX-Klemme, set up the respective address (1 to 30) at the IBX-Klemme and with the address 0 you will be able to respond to all PLC's via PD-bus-path selection.
Send of all kinds of eMail-messages controlled by the LOGO!-Control
